## Project Summaries (In Rank Order)

---

### **Evergreen Sportsmen's Club Improving Rifle and Pistol Range Safety**

**Grant Requested: \$150,000**

The Evergreen Sportsmen's Club will use this grant to install a range safety control building with a firing line public address system, toilet, parking, and pathways to target stations at its 50-year-old facility in Littlerock. The club also will improve its range stormwater drainage and projectile containment berm and install "no blue sky" projectile barriers, cement shooting benches, firing station lighting and heating, and 15 rifle racks. The work will improve safety and update the rifle and pistol range to better accommodate use in the rainy seasons. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-2179)

### **Washington Department of Fish and Wildlife Building a Target Shooting Range in Kittitas County**

**Grant Requested: \$150,000**

The Department of Fish and Wildlife will use this grant to build a target shooting range on Durr Road in Kittitas County in the Wenas Wildlife Area, less than 10 miles outside of Ellensburg. The range will have 10 firing lines each for 25-yard and 100-yard ranges, backstops, target stands, concrete shooting pads, signs, and a parking lot. Currently, people target shoot at several informal areas scattered throughout the north end of the wildlife area that do not have backstops, resulting in the public shooting into hiking and biking trails. Having an established site will give the public a safe and designated place to target shoot, lower the risk of wildfires because the site will have backstops, and protect the surrounding shrub steppe habitat used by elk, mule deer, and birds. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-2088)

### **Washington Department of Fish and Wildlife Developing a Shooting Range at Lake Lenore**

**Grant Requested: \$150,000**

The Department of Fish and Wildlife will use this grant to develop a target shooting site at Lake Lenore in the Sun Lakes Unit of the Columbia Basin Wildlife Area, about 5.4 miles north of the town of Soap Lake. The site will have a 100- and 200-yard berm, covered shooting pads, shooting benches, and a fire line perimeter that is treated and mowed to prevent fires. Much of the habitat in this area has turned into grassland because of wildfires started from an existing shooting site. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-1979)

### **Bremerton Trap & Skeet Club Upgrading a Bremerton Range**

**Grant Requested: \$70,000**

The Bremerton Trap & Skeet Club will use this grant to rebuild one of its skeet houses, erect a pole building for storage, and replace the fence between skeet fields. The club, in existence since 1939, provides safe, family friendly recreational access to the public to engage in the shotgun sports of trap, skeet, five stand, and sporting clays. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-1872)

## Project Summaries (In Rank Order)

---

### **Gig Harbor Sportsmen's Club Improving a Five-Stand Target Range**

**Grant Requested: \$7,550**

The Gig Harbor Sportsman's Club will use this grant to upgrade its five-stand range. The club will buy two new target launchers to replace two old and unreliable ones, two new launcher mobility carts, and a target launch controller. In addition, the club will renovate the range by moving two target launchers and replacing flooring, siding, and access. These renovations will make the range operation more reliable and safer and allow the club to serve more shooters. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-2360)

### **Cowlitz County Replacing a Restroom at the Cowlitz Public Shooting Range**

**Grant Requested: \$77,250**

The Cowlitz County Parks and Recreation Division will use this grant to replace a porta-potty with a restroom accessible to people with disabilities at its trap range at the Cowlitz Public Shooting Range. The current restrooms are about one-fifth mile from the trap range. Work will include installing a new septic system and extending a water line and electricity to the new restroom. This will allow the range to accommodate expanded practice group events and trap shooting competitions. Visit RCO's online Project Snapshot for [more information and photographs of this project](#). (22-2252)
